## RCBS PRESSES

### Turret Press

MODEL	DESCRIPTION
88901	RCBS TURRET PRESS

#### FEATURES & BENEFITS

- Durable and strong cast iron construction of Frame, Turret Head and Toggle Block
- Positive Alignment
- Six-Station Turret Head provides the option of using a Lube Die in station one and seating and crimping bullets in separate operations
- Dies can be left in Turret Head to eliminate set-up and reduce caliber conversion time
- Accepts standard 7/8"-14 threaded dies and standard shell holders
- Reliable tube feed priming system
- Ambidextrous handle placement
- Simple operation, without any complex or automated processes, gives you complete control over every step of the reloading process
- Loading rate of 200 rounds per hour
- RCBS Lifetime Warranty

### Turret Head

MODEL	DESCRIPTION
88902	RCBS TURRET HEAD

#### FEATURES & BENEFITS

- Six stations keep dies automatically set-up for quick caliber changes
- Speeds up reloading time

## RCBS DIES

### Gold Medal Reloading Dies

RCBS is proud to introduce the Gold Medal series of neck bushing rifle dies. This changeable diameter neck bushing type of die has been used by Bench Rest and Long Range Precision shooters for years.

Due to variability in neck brass thickness, RCBS standard dies size the neck below your desired diameter and then pull an expander ball through to get the proper bullet tension. The Gold Medal sizing die features a self centering changeable neck bushing that allows you to precisely set the amount of tension on the bullet. This reduces work hardening of the case neck brass, prolonging case life and increasing accuracy. Neck bushings are available in .001" increments from .189" to .365".

The Gold Medal rifle dies are available in Full-Length and Neck sizing styles. By removing the neck bushing, the Full Length sizing die can be used as a "bump" die to set headspace back the desired amount.

Neck bushings are not included. Proper neck bushing size can be determined two ways. Measure the outside neck diameter of your loaded cartridge, subtract .002" to .003". This allows approximately .001" of brass spring back for correct neck tension. The other is to measure the neck wall thickness of your case, multiply by two, add the diameter of your bullet and subtract .001". RCBS suggests that you have neck bushings one to two sizes above and below your target diameter.

The Gold Medal seat dies features a micrometer adjustable, free floating and self centering bullet seating system with a convenient bullet loading window. The Gold Medal seat die can also be used on progressive presses with the exception of the PPC, BR, .221 Rem Fireball and .22 Hornet cartridges.

#### FEATURES & BENEFITS

- Can be used on most progressive presses
- Available in full-length and neck sizing styles
- Features micrometer adjustable, free-floating and self-centering bullet seating system
- Outside Neck Sizing System reduces work hardening of the neck brass – prolonging case life and increasing accuracy
